

# MARKING AND LABELING

ALL HAZMAT SHIPMENTS MUST BE MARKED AND LABELED WITH:

## Hazard Class Label

✦ **Hazard class labels** must be 3.9 inches (100 mm) on each side, and placed in the diamond formation.

✦ **Primary and subsidiary hazard class labels** must be placed within 6 inches of each other.

## Proper Shipping Name

✦ **Proper shipping name** needs to be on freight, and placed near the hazard class label(s).

✦ If shipping a **generic material**, the **chemical or technical name** must be listed in parenthesis after **n.o.s.** (not otherwise specified).

EXAMPLE:

## ID Number

✦ The **UN number** (or NA number) needs to be listed below or near the shipping name.

## Consignee's Info:

✦ Freight must list the name and address of consignee (**final destination**).

## ADDITIONAL REQUIREMENTS:

### Bulk Shipments .....

**Bulk shipments** are labeled with **Placards** displaying the **UN Number**, but must still be marked with **proper shipping name** and **consignee address**.

### Overpack label ..... **OVERPACK**

**Overpack sticker** must be displayed on shipments that are consolidated in such a way that the **hazard class labels are not visible**.

### Orientation Arrows: .....

**Liquid non-bulk hazmat** shipments must be marked with orientation arrows.

### Limited Quantity .....

**LTD QTY** shipments only require the label, and do not need a proper shipping name or UN number marking.
